PSC Approves Transmission Project to Improve Electric Service Reliability in Forest and Oneida Counties

MADISON - Today, the Public Service Commission (PSC) approved American Transmission Company's (ATC) request to increase reliability for Forest and Oneida Counties' electric service by building and upgrading transmission facilities between Monico and Crandon in northern Wisconsin.

In a verbal decision today, the Commission approved \$8.7 million for ATC to build approximately 12.9 miles of new transmission line from the Venus Substation in the town of Monico to a new substation on the south side of Crandon. The Commission approved the route that generally follows Highway 8. The line will operate at 115 kilovolts but will be built at 138 kilovolt standards, both meeting current needs and allowing for future growth.

The Commission will issue a written order to finalize today's decision at a later date.

The documents associated with ATC's application can be viewed on our Electronic Regulatory Filing System at <http://psc.wi.gov/>. Type case number 137-CE-126 in the boxes provided on the PSC homepage, or click on Electronic Regulatory Filing System button.
